ADVERTISEMENT.

I THOUGHT it advisable to conclude these Statistical Tables of France with a Summary View of the Population of the three Kingdoms; and for want of exact returns from IRELAND and SCOTLAND, I estimated the number of souls in IRELAND at 4,500,000, and in SCOTLAND at 2,500,000, upon the authority of private information. I have since, however, seen the official returns for those two Kingdoms, and the population of the first is there stated to be somewhat more than 4,000,000, and that of the second somewhat more than 1,607,760 persons.

The Islands of GUERNSEY, JERSEY, ALDERNEY, and SARK, the SCILLY ISLANDS, and the Isle of MAN, were not comprised in the British Summary. The total amount of their population is reckoned at about 80,000 persons: thus the total amount of the population of the United Kingdom is 15,031,338 persons, viz. about three-sevenths of the population of France. But if we include the population of her extensive American Colonies, and her vast and very populous dominions in the East-Indies, the difference will entirely disappear. If at the same time we reflect, that the population of the Mother Country is concentrated in a compact territory, which, thanks to her insular situation and her formidable marine, is in reality a fortress; that the Colonies are inaccessible to the impotent rage of our enemy; that both of them carry on, together, a commerce of manufactured and territorial products, equal, or even superior, to that of the combined Nations of

Europe;

Europe; that throughout the Colonies, as well as in the Mother Country, there reigns an universal spirit of attachment to a Government which diffuses prosperity, happiness, and liberty, into every corner of its vast empire; we cannot entertain the smallest doubt respecting the powerful means this Country possesses, of overturning the destructive projects entertained by an abandoned miscreant, against a Nation that will ever scorn his principles, and be able to baffle completely all his wicked attempts.

E R R A T A.

Page x, line 4, for "9,184,918" read 8,184,918.

Ibidem, line 20, for "100,000 $\times \frac{100000}{250}$ " read 100,000 + $\frac{100000}{250}$.

Page 168, line 10, for "Vergeil" read Verceil.

INTRODUCTION.

FRANCE is become the principal State of Europe. She maintains her pre-eminence by force and by terror; and in the first moment of general consternation, such is the ascendancy of the French Government over the other Sovereigns of the Continent, that in its resolutions, that is to say, in the will of Buonaparté, they consider themselves obliged to study their destinies. Nor is this monstrous authority less humiliating to those States in its forms, than fatal in its effects. A *projet* drawn up by Talleyrand, in direct opposition to the most solemn engagements recently entered into at Luneville, annihilates one hundred and fifty Sovereigns, displaces an equal number, throws all Germany into confusion, destroys the Constitution of the Empire, saps the foundation of its most ancient and most general religion, and despoils thousands of individuals of their most lawful possessions, without even making a provision for their future subsistence. The master of the world causes this scandalous production, in which impudence disputes the palm with injustice, to be read in the presence of that assembly of slaves and cut-throats to which he has given the mock appellation of *Senate*. Like Jupiter, he expresses his approbation by a nod; and it instantly becomes an immutable decree,

decree, a law for Europe: all Germany must consent to it, without discussion or reflexion, and execute it without delay. The Emperor himself, the chief of the Germanic Body, and the King of England, one of its principal members, whose possessions are transferred at pleasure, by an Adventurer, without any other right or title than the baseness of his countrymen, and the pusillanimity of his adversaries, are not consulted, nor even made acquainted with the resolution. The Diet itself is only informed of it by means of the Consular Gazette, which a vile wretch, of the name of Bacher, throws insolently upon the table of its conferences. It is in the *Moniteur*, now become the Book of Destiny, and the Official Register of the supreme will of Buonaparté, that the Deputies of the Empire must learn the fate of their Sovereigns. The Princes of Germany are not better treated, than those wandering malefactors whom justice has not been able to apprehend, and has solemnly banished. Like them too, it is in the public papers, that these unfortunate Sovereigns must learn their proscription.

Since then there is a State imperiously dictating such severe laws to other nations, we cannot be made too much acquainted with its strength and resources. It is not, however, the object of the present performance, to consider France in all her military, political, and commercial relations, with the rest of the Powers of Europe. As France (without being a stranger to commerce, for which the industry of her inhabitants and the abundance of her diversified productions,

ductions, so well qualify her), is principally, from the extent of her territory and her vast population, an agricultural and military state, the present Work is confined to an exposure of the fundamental elements of her power, by presenting an exact and circumstantial View of her population, and of the manner in which that population is spread over her extensive, fertile, and concentrated territory.

The Tables that will be found in the present Work, were drawn up in the tenth year of what is called the French Republic, by command of the Government, and under the direction of the Minister of Justice, Abrial, to whom they were dedicated by Chanlaire and Herbin, who had been appointed to complete and superintend the execution thereof.

The conclusions drawn from the following Tables may, possibly, appear somewhat exaggerated; but as the materials of these conclusions are given in the greatest detail, and as no recent and positive enumeration can be opposed to them, it would be absurd to attack established facts by bare conjectures. Domiciliary researches, and inquisitions of all kinds, have besides been so multiplied by the Revolution, and so much rigour and even cruelty have been employed in these repeated acts of despotism, that it is not reasonable to suppose, that any portion of what it so highly imported them to know, can have escaped the vigilance of the French Government.

I have ascertained, myself, the exactness of those Tables, by comparing the population of certain towns

therein stated, with that of the same places, which, previous to the Revolution, I had had an opportunity of being well acquainted with; and have found, in general, the present population of those cities is stated to be inferior to what it was at the former period. shall only quote a few instances. In the year 1783, Mr. Necker* stated the population of the following towns to be; viz.

	Mr. Necker's Account.	The Tables.
Paris	- - - - 660,000	- - 546,856
Lyons	- - - - 160,000	- - 109,500
Lille	- - - - 67,000	- - 54,756
Sedan	- - - - 17,500	- - 10,544
Dunkirk	- - - - 27,000	- - 21,158
Versailles	- - - - 60,000	- - 25,000
Arras	- - - - 21,500	- - 19,364
Rennes	- - - - 35,500	- - 25,904
Orléans	- - - - 38,500	- - 36,175
Toulon	- - - - 28,000	- - 20,500

Here shall I stop; but the comparison proves that the new Tables were not intended for exaggeration; and it is easy to account for the causes from which proceeds the decrease of the population of some towns, to such a high degree. For instance, the massacres of the wealthy manufacturers and other inhabitants of Lyons, has occasioned the migration of a vast number of journeymen and others. Lille and

* In his Work "On the Administration of the Finances of France," published in 1783.

and Sedan were likewise manufacturing towns. The Court resided at Versailles. The massacres and the destruction of the navy, have thinned Toulon of one fourth of its inhabitants. Rennes was the capital of an extensive province, the residence of a numerous Noblesse, which has been either murdered or dispersed. Orléans contained a vast number of sugar bake-houses, and besides, a capital dépôt of maritime imports, &c. &c.

If those same Tables state the population of some few towns to be more numerous than formerly, as namely, Bordeaux and Marseilles, it is to be considered the enumeration of the inhabitants of those cities has been confounded with the population of their respective Cantons.

The only objection arises from the inferiority of number of the Table given by M. Necker, in the year 1783. At that period, he estimates the population of France at twenty-five millions of souls, whereas the present Tables make that of Ancient France amount to twenty-eight millions.

But, first, M. Necker himself acknowledges, that he never received any exact enumerations, and has only drawn his conclusions from hypothetical calculations, founded upon incorrect lists of births and burials. Secondly, As the number of births is much greater than the number of burials in time of peace, and as several of these lists were taken at remote periods, it is certain, that since their date to the commencement of the war of 1792, the population of France must have considerably increased.—

M. Necker,

M. Necker, in the said work, states the total number of births for ten years, from 1771 to 1780 inclusive, to amount to - - - - - 9,409,358
 And that of the deaths - - - - - 9,184,918

The population of France, therefore, had increased during these ten years, and yet there were three years of war - - 1,224,440

Whence it results, that during the twelve subsequent years, if the same proportion be admitted, that the population had increased 1,469,328, or even more; since, in the first place, there was no war, and next, because the augmentation must have increased in proportion as the population became more numerous. For example, if within a twelve-month, owing to the balance between the births and deaths, 25,000,000 inhabitants increase of one 250th part, at the expiration of a year they will amount to 25,100,000; and consequently the increase for the second year will no longer be 100,000, but $100,000 \times \frac{100}{250}$, or 104,000: and so on.

I have thought it incumbent upon me to enter into these particular details, in order to remove the prejudices which some persons might entertain respecting those statements which do not agree with others of a more distant date drawn up without accuracy, and adopted without due investigation. England itself will afford an instance in support of my assertion; since, according to the last returns, the kingdom had been found considerably

considerably more populous than it was generally thought.

For a correct acquaintance with the following Tables, it will be necessary to present the Reader with a short sketch of the present organization of France. This State is divided into one hundred and two *Departments*,* being so many totally distinct Provinces. Each Department, is itself, subdivided into three, four, or five *Districts*, called *Communal Arrondissements*. These Districts are, in their turn, subdivided into *Cantons*. Lastly, each Canton is composed of a certain number of *Communes*; that is to say, of towns and villages. A Commune is sometimes a single town, and sometimes an union of several villages, possessing a Mayor and a Communal Municipality. All the considerable cities are divided into several Communes. The Despot would consider his precarious authority endangered by the re-union of the discontented inhabitants of an entire extensive city. By means of this refinement upon the maxim of tyrants, *divide and govern*, the inhabitants of the same town have ceased to be fellow-citizens.

Each Department is administered by a Prefect, and as many Sub-Prefects as it contains Districts. The details of the administration descends from the Sub-Prefects to the Mayors, who are appointed by the Despot. Each District has a primary Judicial Tribunal

* The six Piedmontese Departments are not included in this number.

Tribunal, and each Department a Criminal Tribunal. Every three Departments possess a Tribunal of Appeal, which takes cognizance, by appeal, of all the causes determined by the Tribunals of the Districts under its jurisdiction. Lastly, each Canton has a Justice of the Peace. All the Tribunals of Appeal acknowledge a superior Tribunal, called the *Court of Cassation*, possessing the power of annulling the sentences of the Tribunals of Appeal which appear to it illegal, and of referring the examination of the cause to any other Tribunal it shall please to appoint. All these Judges are in a state of dependence upon the Government; several have been punished for finding innocent, men who had been accused by the Government; and when the Despot is fearful of an opposition to his vengeance, they are displaced by special commissions.

The Prefects and the Gendarmerie are the two great springs of the Government. The Prefects are appointed by Buonaparté, and can be removed at his pleasure. They enjoy his confidence, and exercise his authority in the Provinces. The Gendarmerie is composed of about 20,000 men, horse and foot, in twenty-seven divisions. Each Gendarme is at once a spy, and a sort of ambulating, armed Justice of Peace, possessing the power of arresting whomsoever he pleases, and of paying domiciliary visits all hours of the day or night.

As to the *political* classification of the French People into Departments, Districts, and Cantons, it is altogether unworthy of the smallest attention.

They

They must not be considered as the different classes into which the citizens of a free State are subdivided, for the purpose of exercising their political rights with greater facility and public benefit; but rather as pens in which the master keeps his cattle inclosed, for the purpose of finding and counting them the more readily.

To all these blessings of French liberty, must be added that of the military conscriptions, which, at the moment when universal peace renders them least necessary, amount to 140,000 men. Never did the Moloch of the Tyrians, nor the men-eating Deities of the Mexicans, devour so many human victims!

Such is the faint outline of that “wonderful fabric of human wisdom,” which some men, whose patriotism consists only in paying compliments to one another at taverns and public dinners, have dared to propose to the people of England as the *ne plus ultra* of social felicity!

One word with respect to the Tables composing this Work: They are four in number, and the title affixed to each will sufficiently point out their object. I must, however, make my Readers acquainted with the geographical measure employed in them.

Hitherto, the measures adopted by the generality of Nations, as well as the subdivisions of those measures, were arbitrarily, or, to speak more correctly, accidentally adopted: such are the English foot, the French toise, &c. The yard is divided into three parts, the toise into six, the Rhinish foot into twelve, &c. Instead of those fundamental mea-

sures, arbitrarily taken and divided by every nation, the French have adopted one connected with the dimensions of the globe. This measure, which they call *metre*, or measure *par excellence*, from the Greek term $\mu\epsilon\tau\rho\omega\nu$, is the ten-millionth part of the fourth of the Terrestrial Meridian, which is, every one knows, the distance from the Pole to the Equator. This primitive measure they have successively multiplied or subdivided by ten, in order to form the greater or smaller measures, by analogy to the decimal system of arithmetic, which is the numeration universally adopted in Europe.

A *Metre*, as we have already seen, is the ten-millionth part of a quarter of the Terrestrial Meridian. One thousand Metres, or a *Kiliometre*, the geographical mensuration adopted by the French, is the ten-thousandth part of the same quarter of the Meridian. In order to find out the proportion between the Kiliometre and the Maritime or Italian Mile (of 60 to degree, which is the geographical measure in most common use), it is to be observed, that the number of miles which the quarter of the Meridian contains is 60×90 , or 5,400. The *Kiliometre* accordingly is to a *Mile* in the ratio of 5,400 to 10,000, or of 27 to 50: and the square Kiliometre to the square mile, as 27×27 to 50×50 ; otherwise as 729 to 2500; that is to say, very nearly as 7 : 24. Thus it follows, that 24 square Kiliometres = 7 square Miles. Kiliometres accordingly may be reduced into square miles by multiplying the number by 7, and dividing the produce by 24.

Now,

Now, as a quarter of the meridian contains 2250 leagues, of 25 to a degree; a league is to a kilometre, as 10,000 to 2250, or 40 to 9, which is the geographical measure in most common use: consequently, a square league is to a square kilometre, as 40×40 to 9×9 , or 1600 to 81; nearly as 79 to 4.

The third Table contains a list of the five hundred principal cities and towns of present France, divided into fourteen classes, according to the number of their inhabitants. The last class contains thirty towns, which, although they contain less than four thousand souls, are too well known to be omitted.

I have placed, at the conclusion of the Work, two succinct Tables, relative to the population of England properly so called.

This Work is terminated by some reflexions as to several uses to which these Tables may be applied. No pains have been spared to attain the greatest accuracy, the only merit of such a Work.

A COMPLETE TABLE

Of all the Departments and Districts, divided into Cantons; with an Account of the Population, Territorial Extent, and number of Commons belonging to the said Departments, Districts, and Cantons.

GOLO (ile de Corse).

This Department not being within the demarcation of the Constitution, the law with respect to the reduction of the cantons has not been carried into effect here; they are the same as those established by the law of 28 *Pluviose*, year 8.

A GENERAL ALPHABETICAL TABLE OF THE DEPARTMENTS;

TOGETHER WITH

An Account of the Population, Territorial Extent, Number of Districts, Cantons, and Commons therein; of Personal, Sumptuary, and other Contributions, either on Moveables or Immovables; on Doors, Windows, and Letters-Patents; of the Hundredths additional Duty; and, lastly, of the Expence of Administration (1), Justice (2), and Public Instruction (3), in each Department, for the 11th Year of the new French Era.

NOTES.

(1) The expences of Administration comprehend the salary of the Prefects, Secretaries-General, and members of the Councils of Prefecture; also that of the Under-Prefects and Clerks, the contingencies of office, the costs for printing and performing rounds, house-rent, and extra expences; the taxations, and remittances of all General Collectors and others; the support of foundlings, and the sums allowed to those citizens who are entrusted with the care of destitute children.

(2) The expences for the maintenance of Justice comprehend the salary of the Judges and Recorders of the Lower Tribunals, of the High Criminal and Commercial Courts of Justice, and of the Justices of the Peace; likewise the wages of the keepers of the courts and gaols, ard of the turnkeys, etc. etc. the subsistence and clothing of prisoners; the rent of the Pretorian-houses and gaols, the galley-slaves, etc. etc.

(3) The expences for Public Instruction comprehend the salary of the Professors, of their assistants, and of the librarians; the wages of the gardeners, houanists, and other servants; the purchase and repair of all necessary instruments, of books, pens, etc. etc. for the use of the schools, and the rent and repair of the premises.

(4) A Kilometre is a French square measure; 24 kilometres are very nearly equal to 7 square miles of 60 to a degree.

(5) The *Patentes* is an annual tax for the privilege of exercising any profession.

(6) The Franc is very nearly the 24th part of the £. sterling's metallic value.

(1) As the Piedmontese Departments were not formally annexed to France but in the 11th Year of the French Era, I have taken the statements relative to those Departments in the Budget for the 12th Year. Some particulars are wanting. (2) As I could not find the amount of the Patentes-Tax, I have supposed it to be nearly in the same proportion with the Land-Tax, as in the other parts of France, viz. nearly as 1 to 10. In fact, by the above Table, the General Total of the Land-Tax is 210,000,000 francs, and of the Patentes-Tax, 21,845,423 francs.

I shall now introduce a few specimens of the manner in which these Tables may become serviceable. The most important point is, to be enabled to find out the increase of territory and population which France has gained in consequence of her conquests. If then, from these Tables we take the thirteen Departments that have been incorporated, to the North of France, namely, *la Dyle*, *l'Escaut*, *les Forêts*, *Jemmappe*, *la Lys*, *Meuse-inférieure*, *les Deux Nèthes*, *l'Ourte*, *Sambre-et-Meuse*, *Mont-Tonnerre*, *la Roër*, *Rbin-et-Moselle*, and *la Sarre*, we shall find a population of 4,209,606 inhabitants over an extent of $62,267\frac{1}{2}$ kilometres, or square miles $18,161\frac{1}{3}$.

Now, if to those thirteen Departments, we add the country of Porentruy and Montbéliard, inclosed in the Department of the *Haut-Rbin*, of which they have been made two Districts (Delémont and Porentruy), and contain 70,689 souls, over an extent of 1,765 kilometres, and the city of Mulhausen, which contains 6,615 inhabitants, we shall find that those parts, which France has added to her former possessions, on this side of the Rhine, offer a population of 4,387,000 souls, over an extent of 64,033 kilometres, or square miles $18,678\frac{1}{3}$.

This prodigious increase which France has entirely taken from Germany, since the Netherlands belonged to the Emperor, is all in one piece, if I may use the expression, and little inferior in extent, though far superior with regard to its population, productions, and commerce, to the united dominions of the two principal sovereign Houses of the Empire, namely, those of Bavaria and Saxony.

Besides this part of Germany, France has extended her limits towards the South, by the acquisition of the *Comtat*

d'Avignon, of Savoy, Geneva, and the county of Nice; that is to say, the Department of Vaucluse, except however the District of Gap, and the Departments of *Léman*, *Mont-blanc*, and of *Alpes-maritimes*. Those four Departments, the District of Gap deducted, contain 727,419 souls, over an extent of 17,495 kilometres, or $5,103\frac{1}{2}$ square miles.

The total increase of France, without reckoning the final surrender of Piémont, which the firmness of Paul I. alone had suspended, amounts therefore to a population of 5,114,419 inhabitants over an extent of 23,790 square miles, which is nearly 215 souls per square mile.

Again, if to the above population we add that of Piémont, which amounts at least to 2,000,000 inhabitants, it will appear that the conquests made by France, in the course of one single war, exceed in population the kingdoms of either Naples, Denmark, Sweden, or Portugal; that they are very near being equal to the kingdom of Prussia, which they surpass by far in riches; and that they are inferior only to the four chief monarchies of Europe.

The fourth Table shews the whole population of France to amount to 33,104,343 souls, over an extent of 636,343 kilometres, or 185,600 square miles. The population of France therefore, upon an average, is in the proportion of very little more than 52 souls for a kilometre, or 178 per square mile.

If now we deduct 5,114,419 souls for 23,790 square miles, the extent of the conquered countries, we shall find that the population of former France amounted to 27,989,924 souls, over 161,810 square miles of territory, which was little more than 172 inhabitants for a mile; whereas, that of the conquered

quered countries gives 215. Thus it appears that the population of former France amounts, in a square number, to 28,000,000 souls, and that of present France to 35,000,000 ; that, consequently, its population is increased one fourth, and most probably its riches and produce in a still higher proportion. If, as it is generally reckoned, the population of Great-Britain, Spain, Prussia, Russia, and Austria, amount to 14—10—7—21—and 24 millions inhabitants, that of France is double to and one half more than that of Great-Britain, treble to and one half more than that of Spain, five fold to that of Prussia : it exceeds that of Austria by two thirds, and that of Russia by one half. Since France has united this immense superiority in population to so many other advantages which she derives from the concentration of her territory, from the strength of her frontiers, from her situation between the two seas, from the possession of so many navigable rivers, in short from the abundance and variety of her productions, what is become of the political balance of Europe? But if in the same scale with France are added, Switzerland, Holland, Spain, Southern Italy, and the adjacent parts of Germany, which every one of them are subjected and tributary to that Empire, there will no longer be any balance between France and all the other independent powers of Europe together, if France be permitted to hold her controul over all those countries.

The North of France, in general, is much more populous than the South, especially Flanders, properly so called, which exceeds in population all the other parts of France, and perhaps, all the different countries of Europe of the same extent. French and Austrian Flanders comprise the Departments of l'Escaut, la Lys, and that of *Le Nord*, exclusive of the district of Avesnes. That country contains 1,748,669 inhabitants, within a territory of 14,182½ kilometres, or 4,136½ miles, which is somewhat more than 422 inhabitants

per square mile; the population of the country around Paris, notwithstanding the weight of that metropolis in the scale, is inferior: in fact, if we take the two Departments of *Seine* and *Seine-et-Oise*, the Department of *la Marne*, exclusive of the district of Fontainebleau, and besides the two districts of Beauvais and Senlis, which belong to the Department of *l'Oise*, we shall find only a population of 1,496,223, over an extent of $14,395\frac{1}{2}$ kilometres, or square miles $4,198\frac{2}{3}$.

If to Flanders, properly so called, are added the two Departments of *la Dyle* and *Deux-Nèthes*, and the two Districts of Tournay and of Mons, which belong to the Department of Jemmappe, the whole of which contains 917,853 souls, within a territory of 8,195 kilometres, we shall find the enormous population of 2,666,502 souls over an extent of 22,378 kilometres, or 6,527 square miles, for that small part of the North of France alone, which comprises the whole of Flanders, and the greatest part of Brabant and of Hainault. This population, then, which gives 408 souls per square mile, consequently surpasses that of any other part of Europe, of the same extent, without even excepting London and its environs, though ever so immensely populous, Holland and Lombardy.

Next to Flanders, Normandy is the most populous country in France; the five Departments of which it is composed, namely, Calvados, Eure, La Manche, Orne, and Seine-inférieure, exhibit a population of 2,465,507 souls over a surface of 31,460 kilometres, or $9,175\frac{5}{6}$ square miles, equal to $268\frac{2}{3}$ inhabitants per mile; a considerable population for a large country, although inferior to that of Flanders.

Now, let us examine into the other extreme in the population, and this we will find in the Alpes; in fact, let us take

take together the three Departments of Alpes (Basses, Hautes, and Maritimes), the Districts of St. Jean de Maurienne and Moutiers, belonging to the Department of Mont-Blanc, and that of Bonneville, belonging to the Department of Leman, we shall find only 517,242 souls for an extent of 22,947 $\frac{1}{2}$ kilometres, or 6,693 square miles, which is little more than 77 souls per mile. The population of the Pyrénées also is but very thin, though superior to that of the Alpes: The three departments des Pyrénées (Basses, Hautes, and Orientales), and that of l'Arriège, contain 900,167 souls, over an extent of 22,397 kilometres, or 6,532 $\frac{1}{2}$ square miles, nearly 138 per square mile.

The most populous amongst all the Departments on the South of the 48th Degree, is that of *Bouches-du-Rhône*, which however contains only 320,072 souls over a territory of 5,315 kilometres, or 1,550 $\frac{2}{3}$ square miles, that is to say, about 205 inhabitants per square mile. Most of the rest have in general but a very inconsiderable population. If, for instance, the eleven Departments of Aude, Aveyron, Cher, Drome, Indre, Landes, Loire-et-Cher, Lozère, Nievre, Var, and Vienne, be taken together, their population will be found to be only 2,599,911 inhabitants over 81,524 $\frac{1}{2}$ kilometres, or 23,778 square miles, consequently 109 souls per square mile, which is little more than one fourth of the population of Flanders. If the population of these eleven Departments be added to that above stated of *Alpes* and *Pyrénées*, we shall find only 3,017,320 inhabitants over a territory of 126,869 kilometres; which evinces that this Southern part of France contains only the eleventh part of its inhabitants, notwithstanding it is one fifth of its extent.

Thus it appears, that although one third part of France only lies on the North of the parallel of Paris, yet the population of

of the Northern part, Paris included, is not much inferior to that of the Southern division. Now though, on the other hand, the meridian that crosses that same capital, leaves at once a more considerable extent and population on the East, than on the West; the great proximity of the sea offers an advantageous compensation for that trifling inequality. Paris, therefore, since the recent conquests of France, may be considered, if not as the geographical, at least as the political centre of France, and consequently is the best-situated capital in Europe, considering the country it belongs to.

I shall forbear making any further application of the Tables which enter into the composition of this work: what I have already observed will afford sufficient proofs of their utility.

THE END.
